CS3009 - Software Engineering - Spring 2026

Project Team Information

Faculty Evaluation & Feedback System by Nuyron

Muhammad Mubashir – 23i-0834

Muhammad Qasim – 23i-0552

Muhammad Zia – 23i-0606

Submitted To: Furqan Nasir

Submission Date: 28 Feb 2026

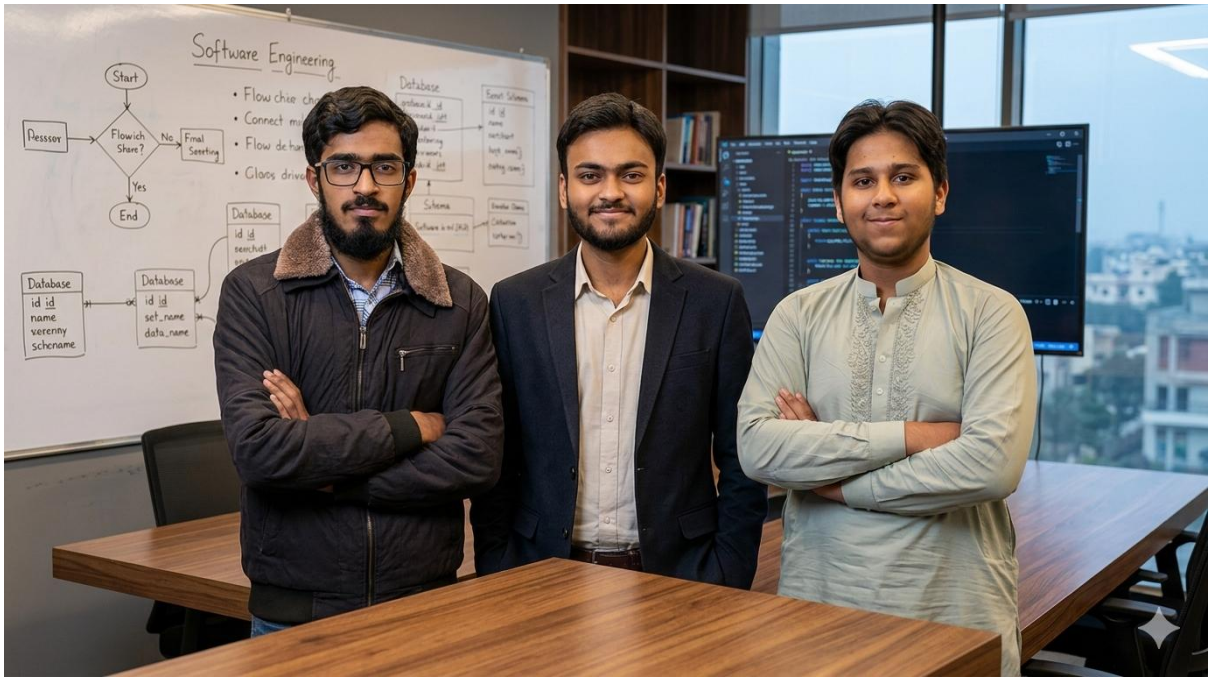
Team Introduction:

Team Name:

Nuyron

Team Logo:

Team Picture:



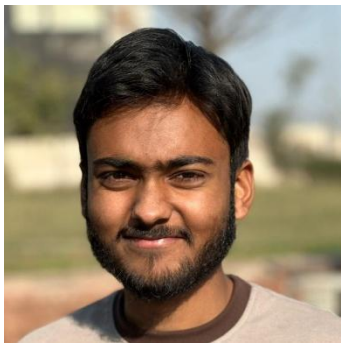
Muhammad Mubashir Islam – 23i-0834:

Mubashir is a Computer Science student with strong foundation in C++ and Java. He has successfully developed the business management systems using Java and JavaFX. He is passionate about software architecture and system design, combining his academic knowledge in operating systems, high performance computing and networks to build efficient, scalable solutions.

Muhammad Qasim – 23i-0552:

Muhammad Qasim is a computer science student having excellent understanding of building management systems using Java and JavaFx. While working on the project like Catalyst "Workflow Management System" and Travel Agency Management Systems he has proven his skills.

Muhammad Zia-ul-baqa – 23i-0606:



Muhammad Zia is a computer science student skilled in JavaFX, C++, and Python, with hands-on experience building scalable applications. He developed a POS system that improved operational efficiency by 30% and optimized KLT feature tracking for 2x performance gains. He seeks a software engineering role focused on building efficient, production-ready systems.

Member Roles:

- Muhammad Qasim: Team Lead, UI Designer, Developer
- Zia-ul-baqa: Architect, Tester, Developer
- Mubashir Islam: Scrum Master, Product Owner, Developer

Communication Modes:

1) WhatsApp and Discord for daily updates and discussion meetings.
2) Response Window: usually 4 hours during daytime (9AM to 9PM) and 12 hours for the night.
3) Phone calls are permitted in case of severe emergency

Meetings:

1) Twice a week, face to face, in university.
2) If someone can't be available for a quick meeting, must notify the Scrum Master in advance.
3) Scrum master must take notes and upload them to the GitHub directory after each meeting.

Version Control:

1) GitHub repository will be created by the team lead, before the start of development for version control and team collaboration.
2) Each member is responsible for the development of the assigned feature and must show his contribution in the project via git commits with proper messages.

Task Assignment:

Scrum Master and Project Head will discuss the goals and decide the checkpoints and deadlines before each deliverable.

Task Submission:

Team lead submits the final PDF (to be reviewed by the Scrum Master and Tester)

Contingency Plan:

If a developer lags behind schedule for more than ONE time, a contingency plan is to be set in place to reduce the scope of the feature/deliverable being worked on.
